Getting Adthyza is simple & easy

Adthyza Cares is a simple, convenient program that saves your patients time and money by allowing patients to get prescriptions delivered directly to them, and **no insurance** is required.

Once the prescription is processed, the medication will be delivered directly to the patient's home.

Three simple steps is all it takes:

STEP 1: You

ePrescribe, call or fax in the prescription to Adthyza Cares at Truax Patient Services. NCPDP# 2431461
NPI# 1700149069 Surescripts# 169851
Phone: (844) 289-3981 - Fax: (218) 444-2267

STEP 2: Patient's Phone

The patient will receive a call from Truax letting them know they received their prescription and to arrange for payment. Also, patients may inquire about their prescription by calling 844-289-3981

STEP 3: Patient's Home

Adthyza will be delivered right to the patient's door

With Adthyza Cares, patients pay a guaranteed price for Adthyza*†

Medication supply	Out-of-pocket cost (cash price)
30 days	\$35 plus shipping
90 days	\$90 free shipping

*Cash-paying patients.

† Based on once-daily dosing

‡ The cash discount prices listed are not valid for use with any prescription drug benefit plan.

¶ Any patient may opt to take advantage of Azurity's cash-payment programs; patients must attest the claim is not being billed through insurance. Prescriptions for cash paying patients will be triaged to the Adthyza Cares Azurity Solutions Patient Direct Program, which is fulfilled by Truax Patient Services. You will receive a call from Truax Patient Services, or you may call 844-289-3981 to inquire about the prescription.

Please see Important Safety Information on next page, and complete Prescribing Information, including Boxed Warning for **ADTHYZA**.

Please note that Adthyza® has not been reviewed by the FDA for safety or efficacy.

IMPORTANT SAFETY INFORMATION

INDICATIONS:

- ADTHYZA® (thyroid tablets, USP) is a prescription medicine indicated as replacement or supplemental therapy in patients with hypothyroidism of any etiology, except transient hypothyroidism during the recovery phase of subacute thyroiditis.
- ADTHYZA® is also indicated as a pituitary TSH suppressant in the treatment or prevention of various types of euthyroid goiters, including thyroid nodules, subacute or chronic lymphocytic thyroiditis (Hashimoto's), multinodular goiter, and in the management of thyroid cancer.

WARNING

DRUGS WITH THYROID HORMONE ACTIVITY, ALONE OR TOGETHER WITH OTHER THERAPEUTIC AGENTS, HAVE BEEN USED FOR THE TREATMENT OF OBESITY. IN EUTHYROID PATIENTS, DOSES WITHIN THE RANGE OF DAILY HORMONAL REQUIREMENTS ARE INEFFECTIVE FOR WEIGHT REDUCTION. LARGER DOSES MAY PRODUCE SERIOUS OR EVEN LIFE-THREATENING MANIFESTATIONS OF TOXICITY, PARTICULARLY WHEN GIVEN IN ASSOCIATION WITH SYMPATHOMIMETIC AMINES SUCH AS THOSE USED FOR THEIR ANORECTIC EFFECTS.

IMPORTANT SAFETY INFORMATION

Do not use ADTHYZA in patients with uncorrected adrenal cortical insufficiency, untreated thyrotoxicosis (high thyroid hormone levels), and apparent hypersensitivity to any component of the product.

The use of thyroid hormones for weight loss, alone or combined with other drugs, is unjustified and has been shown to be ineffective. Neither is their use justified for the treatment of male or female infertility unless this condition is accompanied by low thyroid levels.

Thyroid hormones should be used with great caution in circumstances where the integrity of the cardiovascular system is suspected. In the elderly and in patients with cardiovascular disease, ADTHYZA should be used with greater caution.

Tell your doctor about any other medical conditions you may have, especially heart disease, diabetes, blood clotting problems, and adrenal or pituitary gland problems. The dose of other drugs you may be taking to control these conditions may have to be changed while you are taking.

A reportedly apparent association between prolonged thyroid therapy and breast cancer has not been confirmed, and patients on thyroid for established indications should not discontinue therapy. No confirmatory long-term studies in animals have been performed to evaluate cancer causing potential, mutagenicity, or impairment of fertility in either males or females.

Thyroid replacement therapy for hypothyroid women should not be discontinued during pregnancy, and hypothyroidism diagnosed during pregnancy should be promptly treated. Minimal amounts of thyroid hormones are excreted in human milk. However, caution should be exercised when thyroid is administered to a nursing woman. Routine determinations of serum T4 and/or TSH are strongly advised in

neonates in view of the deleterious effects of thyroid deficiency on growth and development.

Tell your doctor immediately if you experience chest pain, increased pulse rate, rapid, strong, irregular heartbeat, excessive sweating, or any other unusual event.

Partial loss of hair may be experienced by children in the first few months of thyroid therapy, but this is usually a transient phenomenon.

Many drugs and some laboratory tests may alter your therapeutic response to ADTHYZA.

Tell your doctor about all medicines you take, including prescription and nonprescription medicines, vitamins, and herbal supplements. Especially tell your doctor if you take medicines to treat and prevent blood clots (anticoagulants), antidiabetic agents, or oral contraceptives.

For further information, please see the accompanying complete Prescribing Information for ADTHYZA.

To report SUSPECTED ADVERSE REACTIONS, contact Azurity Pharmaceuticals, Inc. at 1-800-461-7449 or the FDA at www.fda.gov/medwatch or call 1-800-FDA-1088.
